(57) **ABSTRACT**

An apparatus comprising:

at least one processor; and

at least one memory including computer program code,

the at least one memory and the computer program code
configured to, with the at least one processor, cause the
apparatus to perform at least the following:

according to a particular determined volume characteristic
of at least one stylus within a detection range of a user
interface for an electronic device, enable the selection of
a particular function of the electronic device selectable
using the user interface, the particular function corre-
sponding to the particular determined volumetric char-
acteristic.
